Advances in International Maternal and Child Health

Volume 2

Edited by D.B. Jelliffe and E.F.P. Jelliffe

This is the second volume of this series dealing with this important and expanding area. It is the only series of comparable scope in the world. The series has the intention of drawing together up-to-date information on major conditions affecting the health of mothers and young children from a global point of view. Plainly, a substantial emphasis has to be given to problems more prominent in so-called less developed countries, and this is reflected in the topics discussed in this volume. Illustrated £17.50

Neuropathology of Parasitic Infections

W. Jann Brown and Marietta Voge

Recent estimates show that hundreds of millions of people are either exposed to or are victims of parasite infections. This book describes and discusses the most important aspects of the pathogenesis, structural and clinical pathology, and diagnostic problems in parasitic afflictions of the human nervous system, infections which in the past have been considered esoteric in the western world but which are being seen with increasing frequency in the United States and Europe. Incidental infections may occur in the most unexpected areas. Case histories have been used as a framework for these presentations. There is no other comprehensive treatment of the above aspects of parasitic infections with particular emphasis on the nervous system and the eye. Illustrated £18.50

Breast-Feeding in Practice

A Manual for Health Workers

Elisabet Helsing and F. Savage King

The merits of breast-feeding are now widely recognized. Doctors and mothers are now convinced that breast really is best, and breast-feeding campaigns are being carried out all over the world. But health workers are still left with the task of explaining to mothers how to breast-feed. Mothers no longer learn this automatically from their own mothers, yet at the same time nurses, doctors, midwives, obstetricians, and nutritionists are often themselves taught little on the subject. Illustrated £5.95
